Greg, Andrew,

I've placed a document 'Generic Option Example Organization and guidance.docx' in the subcommittee's Box folder (link is in the meeting invitation), in the 'Revised UAG working documents' folder. I've also uploaded a word document of the current application guide – its in the 'Current UAG' folder. There you can find the Option A and Option B examples that you can convert to the new application guide.

If you are using MSWord, use the Heading 1 style for the name of the example, then Heading 2 for the Situation, Approach, Example section names. You can use as many subsections as necessary.

There may be some coordination with the description of the uncertainty method that is in Part 2. The Part 2 section 1st draft should have the content you require, but if not, please list it separately so that we can include it. This is just to minimize repeated information. You have a lot of discretion however.

Please include your examples in:

UAG PART 3 USE CASES – OPTION A - Draft.docx (and add the date to the filename)

And

UAG – PART 3 USE CASES – OPTION B – Draft.docx (and add a date to the filename).

Ruchi, Adrian, Dave, and Daniel,

This information is relevant for you as well. We'd like all of the examples to have a similar format.

One item I neglected to mention in our meeting this morning was that the current application guide does have an Option D example. Adrian, you may want to review it.

Todd, this message is mainly FYI for you.

Thank you for your contributions to a very productive meeting this morning. We look forward to including your examples.

Best,
David
